

**NL/TARACORP SUPERFUND SITE
SITE SAFETY AND HEALTH PLAN
ADDENDUM NO. 3**

This Addendum No. 3 to the Site Safety and Health Plan (SSHP), dated September 1, 1993, further establishes guidelines and requirements for the safety of personnel during the field activities associated with the Pre-design Field Investigation for the NL/Taracorp Superfund Site. This addendum pertains to health and safety training requirements for personnel conducting instrument ground surveys. This Addendum to the SSHP should be attached to all copies of the SSHP and distributed to all personnel on-site.

In Sections 7.1 and 8.2 of the SSHP they state that contractor employees must successfully complete a 40-hour OSHA health and safety training course, which fulfills the requirements of 29 CFR 1910.120 for Level C work. For the supplemental investigation, ground surveys of the Remote Fill Areas which are located in residential areas are to be conducted by contractor personnel. The instrument surveying will consist of non-intrusive activities and will not be located near any intrusive activities. It is unlikely that direct contact by site personnel with hazardous substances will occur during the performance of this activity. For these reasons, Level C work will not be performed and a 24-hour OSHA health and safety training course requirement will be more applicable to this task than the 40-hour training course requirement.

This addendum changes Sections 7.1 and 8.2 of the SSHP the OSHA training requirements for ground survey personnel only from the 40-hour OSHA training course to the 24-hour OSHA training course.

APPROVALS

Project Name: NL/Taracorp Superfund Site

Project Number: C3M11Q

Project Manager: Ken Hagg

Date of Issue: September 1, 1993

Effective Dates: September 1, 1993 through December 31, 1993
